The route of the electricity line crosses several public rights of way as shown on the attached map. There must be no unauthorised interference with the use of these PROWs during the course of the works. We must be informed in advance of any works that will affect the use of any PROW so that appropriate steps can be put in place to organise temporary diversion routes.

Dear Hannah,

Thank you for consulting Natural England on planning application ref: NYM/2019/0154EN/OHL.

I note that the deadline for our comments is 01/05/19. We currently do not have capacity to respond to this until a new member of staff joins the team on 23/04/19. I was therefore wondering if it would be possible to be granted an extension of 1 week (until 07/05/19) in order to submit our comments?

I also note that there does not appear to be any ecological information or Habitats Regulations Assessment information on your website for this application. Given that this is within a SSSI and a SPA/ SAC such information is usually required. Has such information been submitted with this application?

Kind Regards,

Lauren

Follow us on Twitter: @NEYorksNLincs

We are here to secure a healthy natural environment for people to enjoy, where wildlife is protected and England's traditional landscapes are safeguarded for future generations.

In an effort to reduce Natural England's carbon footprint, I will, wherever possible, avoid travelling to meetings and attend via audio, video or web conferencing.

Natural England offers two chargeable services – The Discretionary Advice Service ([DAS](#)) provides pre-application, pre-determination and post-consent advice on proposals to developers and consultants as well as pre-licensing species advice and pre-assent and consent advice. The Pre-submission Screening Service ([PSS](#)) provides advice for protected species mitigation licence applications.

These services help applicants take appropriate account of environmental considerations at an early stage of project development, reduce uncertainty, reduce the risk of delay and added cost at a later stage, whilst securing good results for the natural environment.

Subject: NYM/2019/0154EN/OHL Northern PowerGrid OHL replacement archaeological constraints
Date: 11 April 2019 10:25:19
Attachments:

Hi all,

Now this OHL replacement is on the system as a planning application, I would like to reiterate the archaeological constraints brought up previously. There are no designated historical sites near the poles to be replaced, although individual poles do come close to known important archaeological features and in one case will require some mitigation. Advice is as follows:

- Poles 17-23: Lie within HER 18786 Liverton Moor, area of prehistoric activity/settlement. Various field systems/ditches/structures visible on APs/LiDAR. No poles directly affect known features (except 22) but could NP please take care not to drive over or disturb any obvious earthworks or cairns they may come across.
- Pole 22: Lies within HER 22603, and in the centre of a very clear sub-rectangular earthwork enclosure. Obvious on LiDAR. Been interpreted as prehistoric settlement feature. Very similar to a nearby Scheduled Monument south of Gerrick. Could extreme care be taken when accessing the site. Access from the east please, as less visible earthworks will be affected. The siting of the new pole **will require a watching brief by an archaeologist** due to the high potential of the site, with appropriate WSI/report.
- Pole 23: Existing/replacement pole lie immediately to the east of HER 22605, a prehistoric ring bank with possible building platform in the centre. Obvious on LiDAR. Please access by driving around this HER record, do not drive on or over it.
- Replacement poles 27/28: Lie either side of HER 22606, 19thC horseshoe-shaped railway abutment. Should be obvious as also marked on OS mapping. Please avoid driving heavy vehicle over any obvious railway earthwork remains.

A LiDAR scan is attached illustrating the location and scale of the features noted near poles 22/23. In the case of Pole 22, this is located in a highly significant prehistoric enclosure. Although this is not designated due to not yet being properly recorded, a very similar site nearby has been made a Scheduled Monument (<https://historicengland.org.uk/listing/the-list/list-entry/1018807>). I would like to request that an archaeological contractor is engaged to provide a Written Scheme of Investigation, to carry out a watching brief during works, and supply a report to us afterwards. To be clear this is not an excavation but a contractor recording any groundworks. This is to ensure that any significant deposits that may be affected are recorded and not lost to us. If any further information is required or NP would like to discuss mitigation or relocation strategies they are more than welcome to get in touch.

Best,

Nick Mason
