Importance: High

Dear Sir or Madam,

Thank you for seeking the Forestry Commission's advice about the impacts that this application may have on Ancient Woodland. As a non-statutory consultee, the Forestry Commission is pleased to provide you with the attached information that may be helpful when you consider the application:

- Details of Government Policy relating to ancient woodland
- Information on the importance and designation of ancient woodland

Ancient woodlands are irreplaceable. They have great value because they have a long history of woodland cover, with many features remaining undisturbed. This applies equally to Ancient Semi Natural Woodland (ASNW) and Plantations on Ancient Woodland Sites (PAWS).

It is Government policy to refuse development that will result in the loss or deterioration of irreplaceable habitats including ancient woodland, unless "there are wholly exceptional reasons and a suitable compensation strategy exists" (National Planning Policy Framework paragraph 175).

We also particularly refer you to further technical information set out in Natural England and Forestry Commission's <u>Standing Advice on Ancient Woodland</u> – plus supporting <u>Assessment Guide and Case Decisions</u>.

As a Non Ministerial Government Department, we provide no opinion supporting or objecting to an application. Rather we are including information on the potential impact that the proposed development would have on the ancient woodland.

These comments are based upon information available to us through a desk study of the case, including the <u>Ancient Woodland Inventory</u> (maintained by Natural England), which can be viewed on the <u>MAGIC Map Browser</u>, and our general local knowledge of the area.

We suggest that you take regard of any points provided by Natural England about the biodiversity of the woodland.

We also assume that as part of the planning process, the local authority has given a screening opinion as to whether or not an Environmental Impact Assessment is needed under the Town and Country Planning (Environmental Impact Assessment) Regulations 2017. If not, it is worth advising the applicant to approach the Forestry Commission to provide an opinion as to whether or not an Environmental Impact Assessment is needed under the Environmental Impact Assessment (Forestry) (England and Wales) Regulations 1999, as amended.

We hope these comments are helpful to you. If you have any further queries please do not hesitate to contact me.

Yours faithfully,

Serena Clifford

Y&NE Area Administration Officer Forestry Commission Yorkshire & North East Area Foss House, King's Pool, 1-2 Peasholme Green, York YO1 7PX

Please note our new email address, please update your records.

www.gov.uk/forestrycommission

Protecting and expanding England's forests and woodlands, and increasing their value to society and the environment

A summary of Government policy on ancient woodland

Natural Environment and Rural Communities Act 2006 (published October 2006).

Section 40 – "Every public authority must, in exercising its functions, have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving biodiversity".

National Planning Policy Framework (published July 2018).

Paragraph 175 – "development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons and a suitable compensation strategy exists".

National Planning Practice Guidance — Natural Environment Guidance. (published March 2014) This Guidance supports the implementation and interpretation of the National Planning Policy Framework. This section outlines the Forestry Commission's role as a non statutory consultee on "development proposals that contain or are likely to affect Ancient Semi-Natural woodlands or Plantations on Ancient Woodlands Sites (PAWS) (as defined and recorded in Natural England's Ancient Woodland Inventory), including proposals where any part of the development site is within 500 metres of an ancient semi-natural woodland or ancient replanted woodland, and where the development would involve erecting new buildings, or extending the footprint of existing buildings"

It also notes that ancient woodland is an irreplaceable habitat, and that, in planning decisions, Plantations on Ancient Woodland Sites (PAWS) should be treated equally in terms of the protection afforded to ancient woodland in the National Planning Policy Framework. It highlights the Ancient Woodland Inventory as a way to find out if a woodland is ancient.

The UK Forestry Standard (4th edition published August 2017).

Page 23: "Areas of woodland are material considerations in the planning process and may be protected in local authority Area Plans. These plans pay particular attention to woods listed on the Ancient Woodland Inventory and areas identified as Sites of Local Nature Conservation Importance SLNCIs)".

<u>Keepers of Time</u> – A Statement of Policy for England's Ancient and Native Woodland (published June 2005).

Page 10 "The existing area of ancient woodland should be maintained and there should be a net increase in the area of native woodland".

Natural Environment White Paper "The Natural Choice" (published June 2011)

Paragraph 2.53 - This has a "renewed commitment to conserving and restoring ancient woodlands".

Paragraph 2.56 – "The Government is committed to providing appropriate protection to ancient woodlands and to more restoration of plantations on ancient woodland sites".

<u>Standing Advice for Ancient Woodland and Veteran Trees</u> (first published October 2014, revised November 2018)

This advice, issued jointly by Natural England and the Forestry Commission, is a material consideration for planning decisions across England. It explains the definition of ancient woodland, its importance, ways to identify it and the policies that are relevant to it.

The Standing Advice refers to an <u>Assessment Guide</u>. This guide sets out a series of questions to help planners assess the impact of the proposed development on the ancient woodland.

<u>Biodiversity 2020: a strategy for England's wildlife and ecosystem services</u> (published August 2011).

Paragraph 2.16 - Further commitments to protect ancient woodland and to continue restoration of Plantations on Ancient Woodland Sites (PAWS).

Importance and Designation of Ancient and Native Woodland

Ancient Semi Natural Woodland (ASNW)

Woodland composed of mainly native trees and shrubs derived from natural seedfall or coppice rather than from planting, and known to be continuously present on the site since at least AD 1600. Ancient Woodland sites are shown on Natural England's Inventory of Ancient Woodland.

Plantations on Ancient Woodland Site (PAWS)

Woodlands derived from past planting, but on sites known to be continuously wooded in one form or another since at least AD 1600. They can be replanted with conifer and broadleaved trees and can retain ancient woodland features, such as undisturbed soil, ground flora and fungi. Very old PAWS composed of native species can have characteristics of ASNW. Ancient Woodland sites (including PAWS) are on Natural England's Inventory of Ancient Woodland.

Other Semi-Natural Woodland (OSNW)

Woodland which has arisen since AD 1600, is derived from natural seedfall or planting and consists of at least 80% locally native trees and shrubs (i.e., species historically found in England that would arise naturally on the site). Sometimes known as 'recent semi-natural woodland'.

Other woodlands may have developed considerable ecological value, especially if they have been established on cultivated land or been present for many decades.

Information Tools – The Ancient Woodland Inventory

This is described as provisional because new information may become available that shows that woods not on the inventory are likely to be ancient or, occasionally, vice versa. In addition ancient woods less than two hectares or open woodland such as ancient wood-pasture sites were generally not included on the inventories. For more technical detail see <u>Natural England's Ancient Woodland Inventory</u>. Inspection may determine that other areas qualify.

As an example of further information becoming available, Wealden District Council, in partnership with the Forestry Commission, Countryside Agency, the Woodland Trust and the High Weald AONB revised the inventory in their district, including areas under 2ha. Some other local authorities have taken this approach.

Further Guidance

<u>Felling Licences</u> - Under the Forestry Act (1967) a Felling Licence is required for felling more than 5 cubic metres per calendar quarter. Failure to obtain a licence may lead to prosecution and the issue of a restocking notice.

<u>Environmental Impact Assessment</u> - Under the Environmental Impact Assessment (Forestry) (England and Wales) Regulations 1999, as amended, deforestation which is likely to have a significant impact on the environment may also require formal consent from the Forestry Commission.

BY EMAIL ONLY

Dear Miss Blain,

Planning consultation: Application for installation of 7 no. replacement timber windows Location: 2 Egton Road, Aislaby

Thank you for your consultation on the above dated 20 January 2021 which was received by Natural England on 20 January 2021

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

SUMMARY OF NATURAL ENGLAND'S ADVICE

NO OBJECTION

Based on the plans submitted, Natural England considers that the proposed development will not have significant adverse impacts on statutorily protected nature conservation sites.

Natural England's generic advice on other natural environment issues is set out at Annex A.

Sites of Special Scientific Interest Impact Risk Zones

The Town and Country Planning (Development Management Procedure) (England) Order 2015 requires local planning authorities to consult Natural England on "Development in or likely to affect a Site of Special Scientific Interest" (Schedule 4, w). Our SSSI Impact Risk Zones are a GIS dataset designed to be used during the planning application validation process to help local planning authorities decide when to consult Natural England on developments likely to affect a SSSI. The dataset and user guidance can be accessed from the data.gov.uk website

Further general advice on the consideration of protected species and other natural environment issues is provided at Annex A.

We would be happy to comment further should the need arise but if in the meantime you have any queries please do not hesitate to contact us.

For any queries regarding this letter, for new consultations, or to provide further information on this consultation please send your correspondences to consultations@naturalengland.org.uk.

Yours sincerely,

Ben Jones Consultations Team

Annex - Generic advice on natural environment impacts and opportunities

Sites of Special Scientific Interest (SSSIs)

Local authorities have responsibilities for the conservation of SSSIs under s28G of the Wildlife & Countryside Act 1981 (as amended). The National Planning Policy Framework (paragraph 175c) states that development likely to have an adverse effect on SSSIs should not normally be permitted. Natural England's SSSI Impact Risk Zones are a GIS dataset designed to be used during the planning application validation process to help local planning authorities decide when to consult Natural England on developments likely to affect a SSSI. The dataset and user guidance can be accessed from the Natural England Open Data Geoportal.

Biodiversity duty

Your authority has a <u>duty</u> to have regard to conserving biodiversity as part of your decision making. Conserving biodiversity can also include restoration or enhancement to a population or habitat. Further information is available <u>here</u>.

Protected Species

Natural England has produced <u>standing advice</u>¹ to help planning authorities understand the impact of particular developments on protected species. We advise you to refer to this advice. Natural England will only provide bespoke advice on protected species where they form part of a SSSI or in exception al circumstances.

Local sites and priority habitats and species

You should consider the impacts of the proposed development on any local wildlife or geodiversity sites, in line with paragraphs 171 and 174 of the NPPF and any relevant development plan policy. There may also be opportunities to enhance local sites and improve their connectivity. Natural England does not hold locally specific information on local sites and recommends further information is obtained from appropriate bodies such as the local records centre, wildlife trust, geoconservation groups or recording societies.

Priority habitats and Species are of particular importance for nature conservation and included in the England Biodiversity List published under section 41 of the Natural Environment and Rural Communities Act 2006. Most priority habitats will be mapped either as Sites of Special Scientific Interest, on the Magic website or as Local Wildlife Sites. The list of priority habitats and species can be found here2. Natural England does not routinely hold species data, such data should be collected when impacts on priority habitats or species are considered likely. Consideration should also be given to the potential environmental value of brownfield sites, often found in urban areas and former industrial land, further information including links to the open mosaic habitats inventory can be found here2.

Ancient woodland, ancient and veteran trees

You should consider any impacts on ancient woodland and ancient and veteran trees in line with paragraph 175 of the NPPF. Natural England maintains the Ancient Woodland <u>Inventory</u> which can help identify ancient woodland. Natural England and the Forestry Commission have produced <u>standing advice</u> for planning authorities in relation to ancient woodland and ancient and veteran trees. It should be taken into account by planning authorities when determining relevant planning applications. Natural England will only provide bespoke advice on ancient woodland, ancient and veteran trees where they form part of a SSSI or in exceptional circumstances.

Protected landscapes

1......

¹ https://www.gov.uk/protected-species-and-sites-how-to-review-planning-proposals

²http://webarchive.nationalarchives.gov.uk/20140711133551/http://www.naturalengland.org.uk/ourwork/conservation/biodiversity/protectandmanage/habsandspeciesimportance.aspx</sup>

For developments within or within the setting of a National Park or Area or Outstanding Natural Beauty (AONB), we advise you to apply national and local policies, together with local landscape expertise and information to determine the proposal. The National Planning Policy Framework (NPPF) (paragraph 172) provides the highest status of protection for the landscape and scenic beauty of National Parks and AONBs. It also sets out a 'major developments test' to determine whether major developments should be exceptionally be permitted within the designated landscape. We advise you to consult the relevant AONB Partnership or Conservation Board or relevant National Park landscape or other advisor who will have local knowledge and information to assist in the determination of the proposal. The statutory management plan and any local landscape character assessments may also provide valuable information.

Public bodies have a duty to have regard to the statutory purposes of designation in carrying out their functions (under (section 11 A(2) of the National Parks and Access to the Countryside Act 1949 (as amended) for National Parks and S85 of the Countryside and Rights of Way Act, 2000 for AONBs). The Planning Practice Guidance confirms that this duty also applies to proposals outside the designated area but impacting on its natural beauty.

Heritage Coasts are protected under paragraph 173 of the NPPF. Development should be consistent the special character of Heritage Coasts and the importance of its conservation.

Landscape

Paragraph 170 of the NPPF highlights the need to protect and enhance valued landscapes through the planning system. This application may present opportunities to protect and enhance locally valued landscapes, including any local landscape designations. You may want to consider whether any local landscape features or characteristics (such as ponds, woodland or dry stone walls) could be incorporated into the development in order to respect and enhance local landscape character and distinctiveness, in line with any local landscape character assessments. Where the impacts of development are likely to be significant, a Landscape & Visual Impact Assessment should be provided with the proposal to inform decision making. We refer you to the Landscape Institute Guidelines for Landscape and Visual Impact Assessment for further guidance.

Best and most versatile agricultural land and soils

Local planning authorities are responsible for ensuring that they have sufficient detailed agricultural land classification (ALC) information to apply NPPF policies (Paragraphs 170 and 171). This is the case regardless of whether the proposed development is sufficiently large to consult Natural England. Further information is contained in <u>GOV.UK guidance</u>. Agricultural Land Classification information is available on the <u>Magic</u> website on the <u>Data.Gov.uk</u> website. If you consider the proposal has significant implications for further loss of 'best and most versatile' agricultural land, we would be pleased to discuss the matter further.

Guidance on soil protection is available in the Defra <u>Construction Code of Practice for the Sustainable Use of Soils on Construction Sites</u>, and we recommend its use in the design and construction of development, including any planning conditions. Should the development proceed, we advise that the developer uses an appropriately experienced soil specialist to advise on, and supervise soil handling, including identifying when soils are dry enough to be handled and how to make the best use of soils on site.

Access and Recreation

Natural England encourages any proposal to incorporate measures to help improve people's access to the natural environment. Measures such as reinstating existing footpaths together with the creation of new footpaths and bridleways should be considered. Links to other green networks and, where appropriate, urban fringe areas should also be explored to help promote the creation of wider green infrastructure. Relevant aspects of local authority green infrastructure strategies should be delivered where appropriate.

Rights of Way, Access land, Coastal access and National Trails

Paragraphs 98 and 170 of the NPPF highlights the important of public rights of way and access. Development should consider potential impacts on access land, common land, rights of way, coastal access routes and coastal margin in the vicinity of the development and the scope to mitigate any adverse impacts. Consideration should also be given to the potential impacts on any nearby National Trails, including the England Coast Path. The National Trails website www.nationaltrail.co.uk provides information including contact details for the National Trail Officer.

Environmental enhancement

Development provides opportunities to secure net gains for biodiversity and wider environmental gains, as outlined in the NPPF (paragraphs 8, 72, 102, 118, 170, 171, 174 and 175). We advise you to follow the mitigation hierarchy as set out in paragraph 175 of the NPPF and firstly consider what existing environmental features on and around the site can be retained or enhanced or what new features could be incorporated into the development proposal. Where onsite measures are not possible, you should consider off site measures. Opportunities for enhancement might include:

- Providing a new footpath through the new development to link into existing rights of way.
- Restoring a neglected hedgerow.
- Creating a new pond as an attractive feature on the site.
- Planting trees characteristic to the local area to make a positive contribution to the local landscape.
- Using native plants in landscaping schemes for better nectar and seed sources for bees and birds.
- Incorporating swift boxes or bat boxes into the design of new buildings.
- Designing lighting to encourage wildlife.
- Adding a green roof to new buildings.

You could also consider how the proposed development can contribute to the wider environment and help implement elements of any Landscape, Green Infrastructure or Biodiversity Strategy in place in your area. For example:

- Links to existing greenspace and/or opportunities to enhance and improve access.
- Identifying opportunities for new greenspace and managing existing (and new) public spaces to be more wildlife friendly (e.g. by sowing wild flower strips)
- Planting additional street trees.

condition or clearing away an eyesore).

 Identifying any improvements to the existing public right of way network or using the opportunity of new development to extend the network to create missing links.
 Restoring neglected environmental features (e.g. coppicing a prominent hedge that is in poor From:

Rose Cottage is a Grade II Listed Building located in a prominent position in the middle of the Aislaby Conservation Area. As a listed building the main consideration is whether the proposed work would preserve this Grade II listed building or any special architectural or historic interest that it possesses; and whether the development would preserve or enhance the character or appearance of the Staithes Conservation Area.

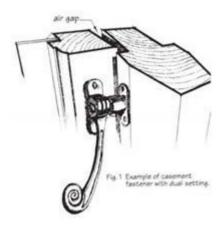

Rose Cottage forms a typical example of a local vernacular cottage constructed of natural stone under a pantile roof. The front elevation has non-traditional slim DG sliding sash windows to the front elevation with non-traditional casement windows to the sides. Of particular note is the poor detailing of the current windows (extremely wide 40mm glazing bars to the sashes and stormproof construction to the casements). As such it is considered that the current windows do not contribute to the significance of this Listed Building and as such their full replacement, provided they are of traditional construction using appropriately sized frames and glazing bars, is likely to enhance the character or appearance of Rose Cottage. This approach is in line with guidance on windows to listed buildings produced by Historic England in 'Traditional Windows: their care, repair and upgrading' Chapter 6 https://historicengland.org.uk/images-books/publications/traditional-windows-care-repair-upgrading/

While traditional windows normally incorporate glazing bars of between 18-22mm the use of 26mm is considered acceptable in this instance, purely on the basis of the poor constructional details of the current windows which incorporate 40mm glazing bars and are a particularly discordant feature. This is not something which we would normally support where better detailed windows exist.

In terms of impact on the Aislaby Conservation Area, the proposed replacement windows will be of substantial improvement in terms of design and construction and will therefore provide an overall improvement to the character and appearance of the area.

I would however request a small detail to the casement windows which is to add a simple bead detail to the frame and the central mullion and also consideration of a traditional fastener – examples of the are shown below.

If the owner is minded to agree to these small amendments, an email exchange confirming this will suffice (no need to provide amended details).
