Decision No. NYM/2022/0219

06/09/2022

Dear Megan,

Please find enclosed 4 amendments we wish to make to drawing D11412-21E.

The dimension of the building and where it is sited are to stay the same, however after seeking advice from various companies, showing them the design and looking at other sheds, they did make comment about some of the aesthetics, energy efficiency and a health and safety issue with the building.

No1. We would like to remove the roller shutter door on the East end of the building, this would allow us to utilise the shed better inside and allow us to put some racking on the back wall for the normal day to day sundries of the caravan park electrical equipment, toilet rolls etc.

No2. At the moment the sides of the shed are green box profile at the top and Fairford block at the bottom, we would like to take the panels to the bottom. This would allow us to insulate the building stopping any condensation that generally occurs in these types of building. The building will last longer and it will again better protect the machinery and sundries.

No3. With ever increasing energy bills we would like to change some of the green sheet roof for Sky lights allowing better light during the day and saving on Energy cost.

No4. Adding a pedestrian door for ease of access. After speaking to the shed builders explaining that we intended to store machines in the shed they said that for health and safety reasons we should have a pedestrian door. The manufactures said we would also need this should the roller door fail. This would be in the same colour as the cladding and on the same face.

Should you have any queries regarding this please do not hesitate in contacting me

Kind regards

Craig Horrocks

REPLACE SOME OF THE BOX PROFILE ROOF FROM GREEN TO SKY LIGHTS, SO THAT DURING THE DAY WE DONT WASTE ELECTRICITY WITH ROCKETING ENERGY BILLS.
