

[Home](#) » [Products](#) » DOUBLE GLAZED CONSERVATION LUXLITE®

Designed to replicate the original Victorian cast iron skylight, it features a slim shaped split bar that is constructed of high-quality aluminium.

If you are renovating a listed property, a double glazed Roof Maker Conservation Luxlite® rooflight could help you achieve a look that is acceptable to planning requirements, whilst also improving the overall thermal performance of the building.

Traditionally, Victorian skylights had the split sandwiched between the glass panes, Roof Maker's split is structurally bonded to the glass to eliminate the presence of a cold bridge, significantly minimising the risk of condensation forming. The bonding process also eliminates the opportunity for dirt and debris to accumulate underneath the split. By constructing the split from aluminium, rather than commonly used steel, the risk of corrosion is also greatly reduced.

Product Overview

Signature Roof Maker frameless design, allowing the maximum amount of light to enter your home.

Weather tested against BS 6375 Pt 1.

Opening Conservation Luxlite™ rooflights can be controlled remotely with an opening of up to 400mm for ventilation.

Featuring an innovative flashing apron, which offers superior water dispersion.

Made to measure sizes from 0.4m up to 3m wide available.

The number of glazing split bars is dependant on the size of the rooflight you want.

WINNER of the 2018 Pitched Roofing Awards "Best Use of a Rooflight"
