

DESIGN, ACCESS and HERITAGE STATEMENT

Howdale School Cottage, Howdale School Cottage, Browside, Ravenscar, YO13 ONH

The property Howdale School Cottage is a two-storey large detached building, which is a private dwelling. The property lies within the national park and when the property was renovated there was a condition that timber windows had to be installed.

The property is constructed of stone with a pantile roof tile with timber fenestration. The existing front and rear windows are all timber framed storm casements and painted white.

The Proposal

To replace all the existing windows. The proposed windows are to be a conservation type storm casement known in grained white upvc with designs to match existing.

Windows & Doors

Design

The proposed windows are to replace rotten timber frames. The existing windows are not particularly good quality timber frames. The current frames offer very poor insulation and are causing a considerable amount of condensation. The existing opening sashes unfortunately rattle when windy and the existing glazing is becoming unsafe. Unfortunately, it is not possible to repair these frames as the quality of the original timber is so poor.

The proposed replacement windows are to each elevation of the property. All the properties windows are proposed to be replaced. The proposed are highlighted in red on the elevation drawings attached. The replacements will be a upvc storm casement in grained white upvc, they will have external astragal bars (Georgian Bar), with dummy sashes to create an equal site line. The specification of the conservation type window is attached to the application and has previously been approved for use within the surrounding area.

The use of the upvc casement product complements the appearance of the property and blends in with the surrounding area. There are other upvc windows within the immediate area and surrounding properties and these proposed windows do not adversely affect the street view within the area nor the host building itself.

The proposed replacement windows will be of similar appearance of the existing windows. The use of the conservation type casement product will mean that the windows will be very difficult to distinguish between upvc and the traditional timber.

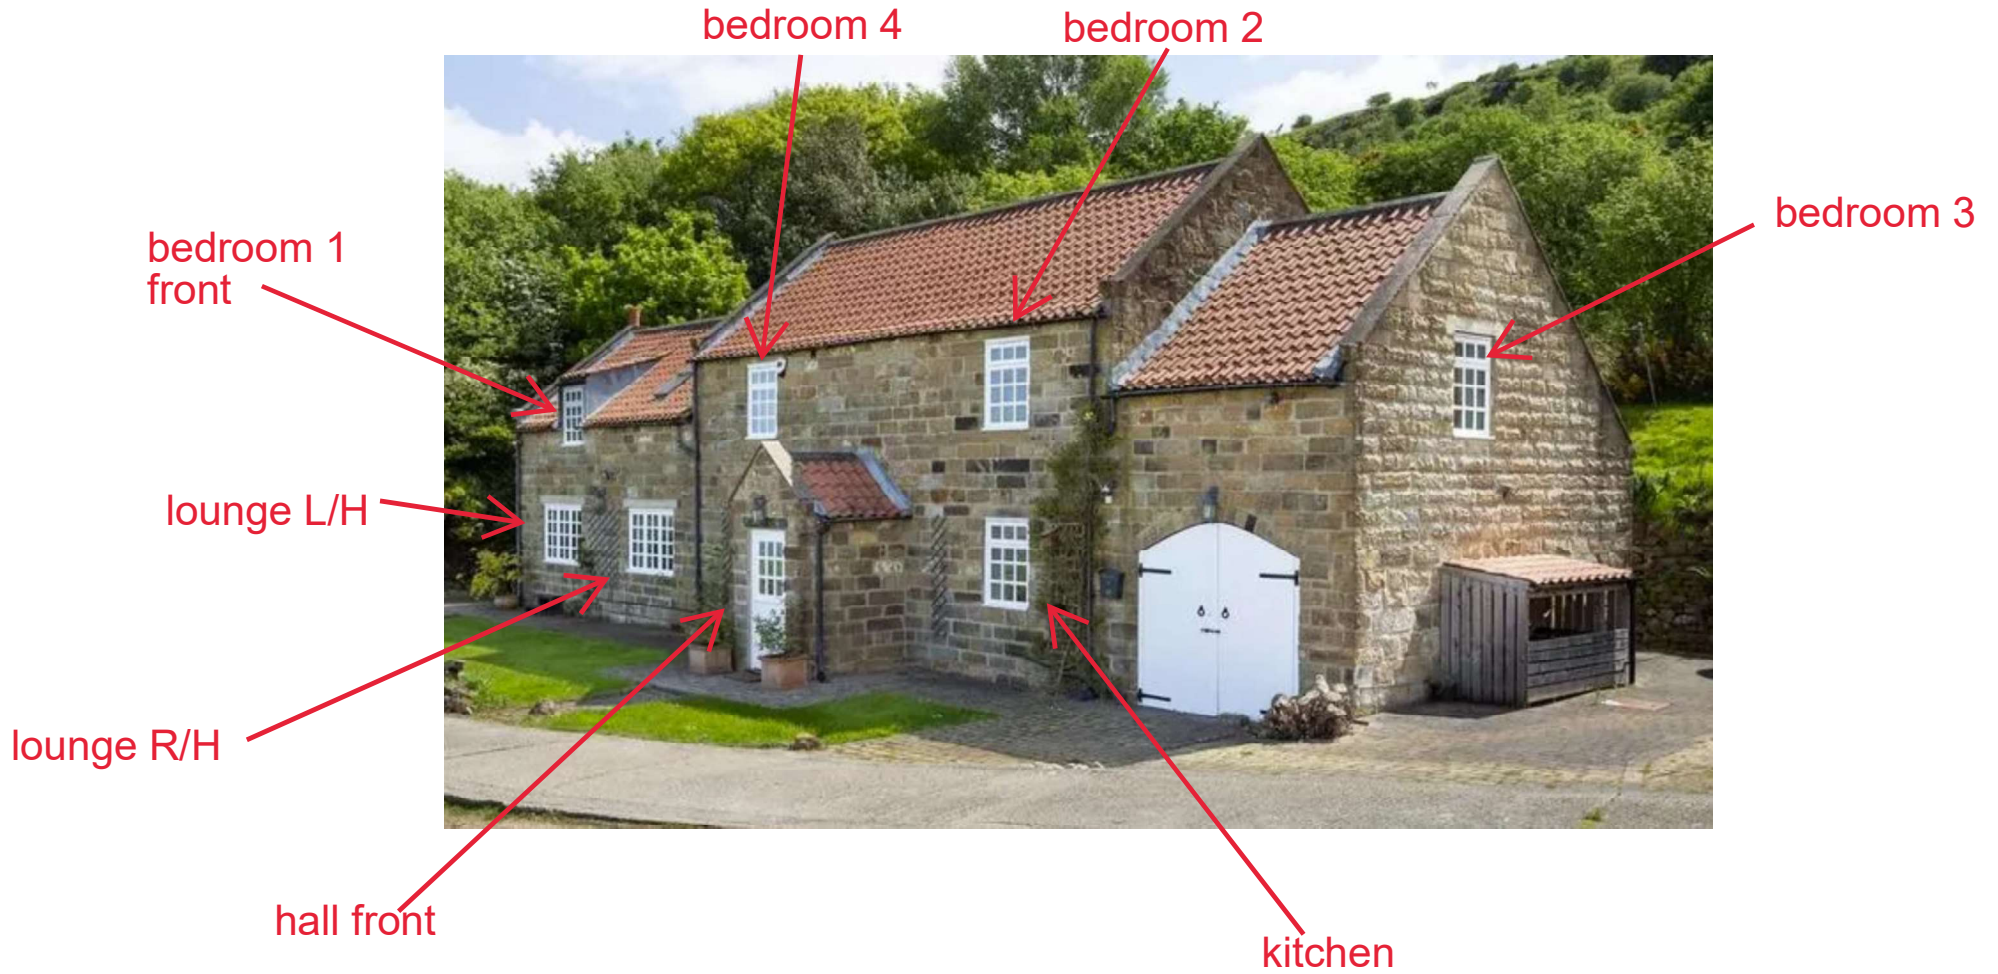

All the windows are replacement only. In terms of installation all the windows are to be set within the existing reveals behind the stonework where the existing apertures allow, as per the existing. This to ensure they do not project forward in order to give the appearance of the traditional windows as they are now. The proposed will be double glazed and include trickle vents as per building regulations.

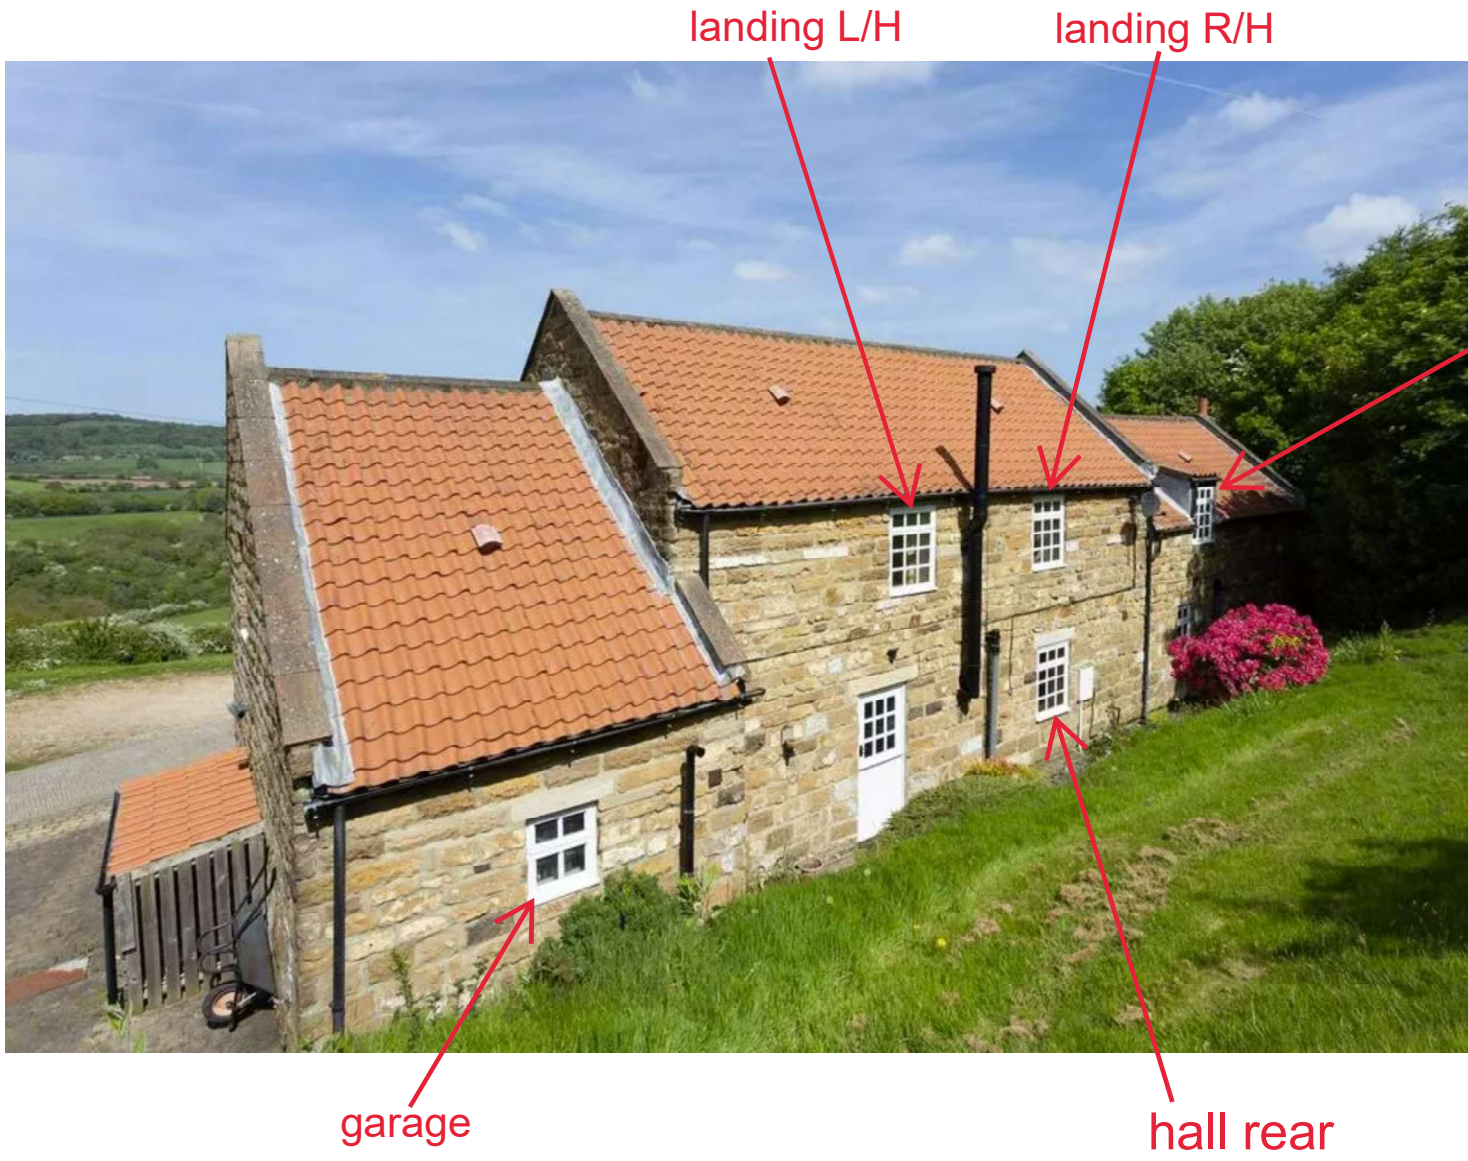

The applicant is proposing the use of a non-traditional material within the national park however we feel that the use of this conservation type casement in a grained white upvc product is very similar to the existing windows and the local authority in special circumstances can allow the use of a non-traditional material providing the quality of the proposed product is of a high standard, as they have allowed in similar properties within the surrounding area

ACCESS

The windows will be accessed from the inside when being replaced, all window openings are proposed to be improved from the existing.
