

irish oak foil

The creation of a woodgrain effect is achieved by using a durable foil that has been specially laminated on to the PVCu profile.

Each bespoke woodgrain and coloured foil is individually engineered to withstand the rigorous British climate including direct sunlight, heavy rainfall, strong winds and heavy frost. Once applied to the PVCu profile it is then manufactured into doors and windows that carry a comprehensive ten-year guarantee.

These striking alternatives to real wood are now very popular with home-owners who are looking for a distinct individual appearance in conjunction with inspired design. Using clever design in keeping with your property can often transform bland or tired properties to add that all important curbside appeal.

A woodgrain finish on windows or doors can offer an investment that will almost certainly increase the value of your home.

So...if you have an eye for detail... then let your imagination run free.

### tilt/turn

Tilt and Turn windows are specially designed with practicality and functionality in mind!

They enable you to have a quick means of escape in the unlikely event of an emergency occurring.

The first rotation of the handle will allow the top of the window to tilt back into your room to provide natural ventilation.

A further rotation will allow you to pull the window fully inwards towards you, which will allow you to clean the outside very easily. It can't do the cleaning for you, but the tilt and turn mechanism is a step in the right direction!
