Hi Hilary,

I have been able to look through the ecological report produced for the developers regarding this application site, which is thorough and includes mitigation measures which I understand are to be implemented as part of the works. After discussing with the Forestry Commission ecologist who has been involved prior to the planning application being put forward, I am satisfied that no additional condition is required.

It would be helpful for consistency to include a bird informative if permission is granted.

Many thanks,

Elspeth
