This application has been made after the work had already commenced to both the activity and building work. What guarantees can be made to ensure that any further activity does not commence and what about the current situation with the industrial activities at present? We share the same postcode as the applicant and our back garden is opposite the site. There is not just fish processing unit there is log cutting, fabrication work, storage containers as well as car repairs we have to sit in our back garden listening to loud radio music steel cutting, chain saws and tractors revving. We also have holiday cottages here and our clients can no longer enjoy the peace and quiet of the countryside listening to the birds and other animals as before. Why as a neighbour with the same postcode as the applicant not informed of this application when others have been. Seven days a week they work the traffic has quadrupled in the last months nobles alone doing hourly trips up and down the lane. Drains and waste: does this mean all washing down water and wastewater from the fish unit run straight onto fields will this not cause smell and flies. Yorwaste has not been seen traveling to and from the site. Smoke from smoke house when foggy or sea fret occurs which is regular can be quite nauseous. What will be happening in the second shed already erected has that got planning or will it be retrospective. The site is not just one unit it's an industrial estate.
