Hi Christopher

Following on from our telephone conversation earlier this week, I now email you with the following information as requested:

1. Velux window Type:- the Velux window proposed to be used is the UK04 Velux Conservation roof window (size134x98cm) finished in matt grey so as to match the colour of the other Velux installed as originally specified by yourselves.
2. Justification for the size specified & reason for the proposed installation:- The Velux rooflight is proposed to be installed to allow additional light into the new bedroom which currently relies solely on natural light from three fairly small windows making the space quite dark. This room was previously the kitchen, and the utility room (now the shower room) was open to this space. This meant that the space, when it was the kitchen, benefited from additional light provided by two additional windows in what is now the shower room. As the existing utility has been partitioned off to form the shower room, the benefit of that additional light has been lost hence the need to introduce additional light via the proposed Velux. The ceiling within the new bedroom has now been vaulted and additional supporting structure has been introduced to achieve this. As there is supporting structure at the mid span of the roof line across the full span, this has restricted us to the length of Velux we can install. On this basis a Velux that is wider than it is long needs to be utilized, firstly to fit within the roof between supporting structure and secondly to provide enough additional natural light to prevent the bedroom being dark.

Hopefully the above information provides you with the additions you require, though should you have any further questions please do not hesitate to contact me.

Kind regards
