

NYMNPA
05/12/2018

Produced 31 May 2018 from the Ordnance Survey MasterMap (Topography) Database and incorporating surveyed revision available at this date.

The representation of a road, track or path is no evidence of a right of way. The representation of features as lines is no evidence of a property boundary.

JOB NUMBER: FSS000 / 016A
DRAWING NO.

North side of the cupola.

Inside the cupola .
The posts continue through the roof with a lead flashing. Water appears to be running down the posts, behind this flashing and down into the roof space.

With the fascia removed decay can be seen in the post, a result of the water getting behind the fascia and not drying out.

A fascia, made of two sections is nailed to the outward face of each post. This fascia sits on top of a lead capping/cill.

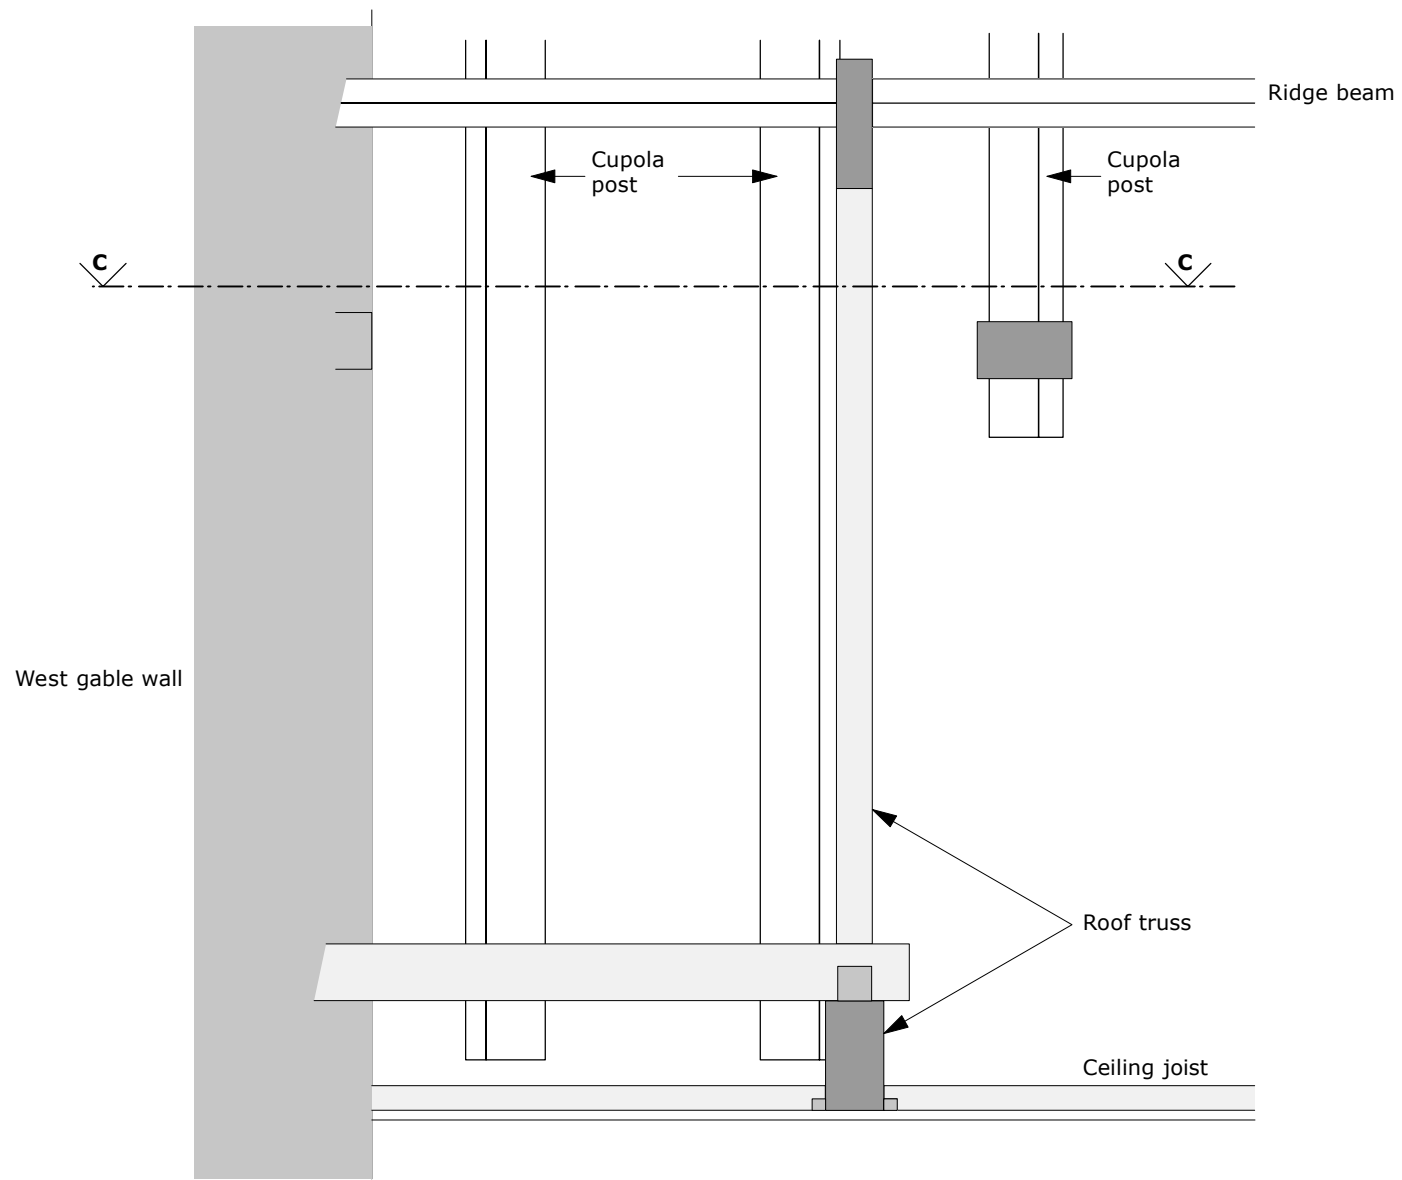

NYMNPA

Existing cupola post. Decayed timber cut out and replaced with new/galvanised steel post.

Fin connector welded to plate on steel post. Fin angled to suit timber post, fixed into slot in timber and bolted through. Length dependent on extent of timber decay.

Horizontal oak boarding reinstated to height of existing.

Steel post rotated on base plate to be square to tiles. Flashing dressed up sides.

Existing roof.

Steel post continues through slates.

Angle fixing to existing cupola support post.

Existing cupola post. Decayed timber cut out.

This downpipe to be removed.
 - the condition of the stone
 channel at the foot of the wall
 causes most of the water from
 this downpipe to drain into the
 ground below the church.

This downpipe to be
 100mm cast iron.

Existing gully
 draining west.
