Dear Sir,

Gribdale Stables, Dykes Lane, Great Ayton TS9 6HJ – Barn Conversion.

I understand that you have received several objections from neighbours concerning the shared water supply to this project.

My client realizes that continuing to use the existing water supply will become a problem and has made arrangements for a new borehole to provide an independent water supply.

Below is a copy of an e-mail quotation for the work involved and my client will be accepting this as soon as planning approval is granted.

I had a look at the geology again, the site lies on the Redcar mudstone and whilst it is not a recognised aquifer, we have had success drilling it before, Ian Watson at Howe Hill being a good example.

There is a lot of clay overburden and we may have to case over 26 metres and drill to 60 metres. Work on a budget price of £7,750 plus vat to drill the borehole and then a further budget of £5,000 plus vat for borehole pumps, filters to remove iron & manganese. This should give you an up and running system.

All of the above depends on good access, if you are interested, I would need to visit site but at least this gives you a good over view.

Regards Ralph
