Dear Mrs Ward

Replacement Shed & Greenhouse Roof.

I have filled in these forms as well as I can. I am confident there is all the information needed, but can only hope the form is acceptable.

Our glass fibre shed partly collapsed with the weight of snow in Nov/Dec 2010. It obstructed the shedding of snow by the greenhouse, which also collapsed.

We propose to replace these with a roof, apex N-S, so that it can shed snow and rain. Most of the E. side to be pan-tiles with a short part of polycarbon for the fruit trees on the S. end of the barn. The west roof and wall to be polycarbon. It is for plant propagation and garden equipment - tools, chairs, pots, composts, barrows etc. It also connects back and front gardens.

The only 'building' is the roof.

The exact plan is dictated by the three existing walls, & it will not be higher than 5 metres.

I do hope this will do. You will let us know the fee.

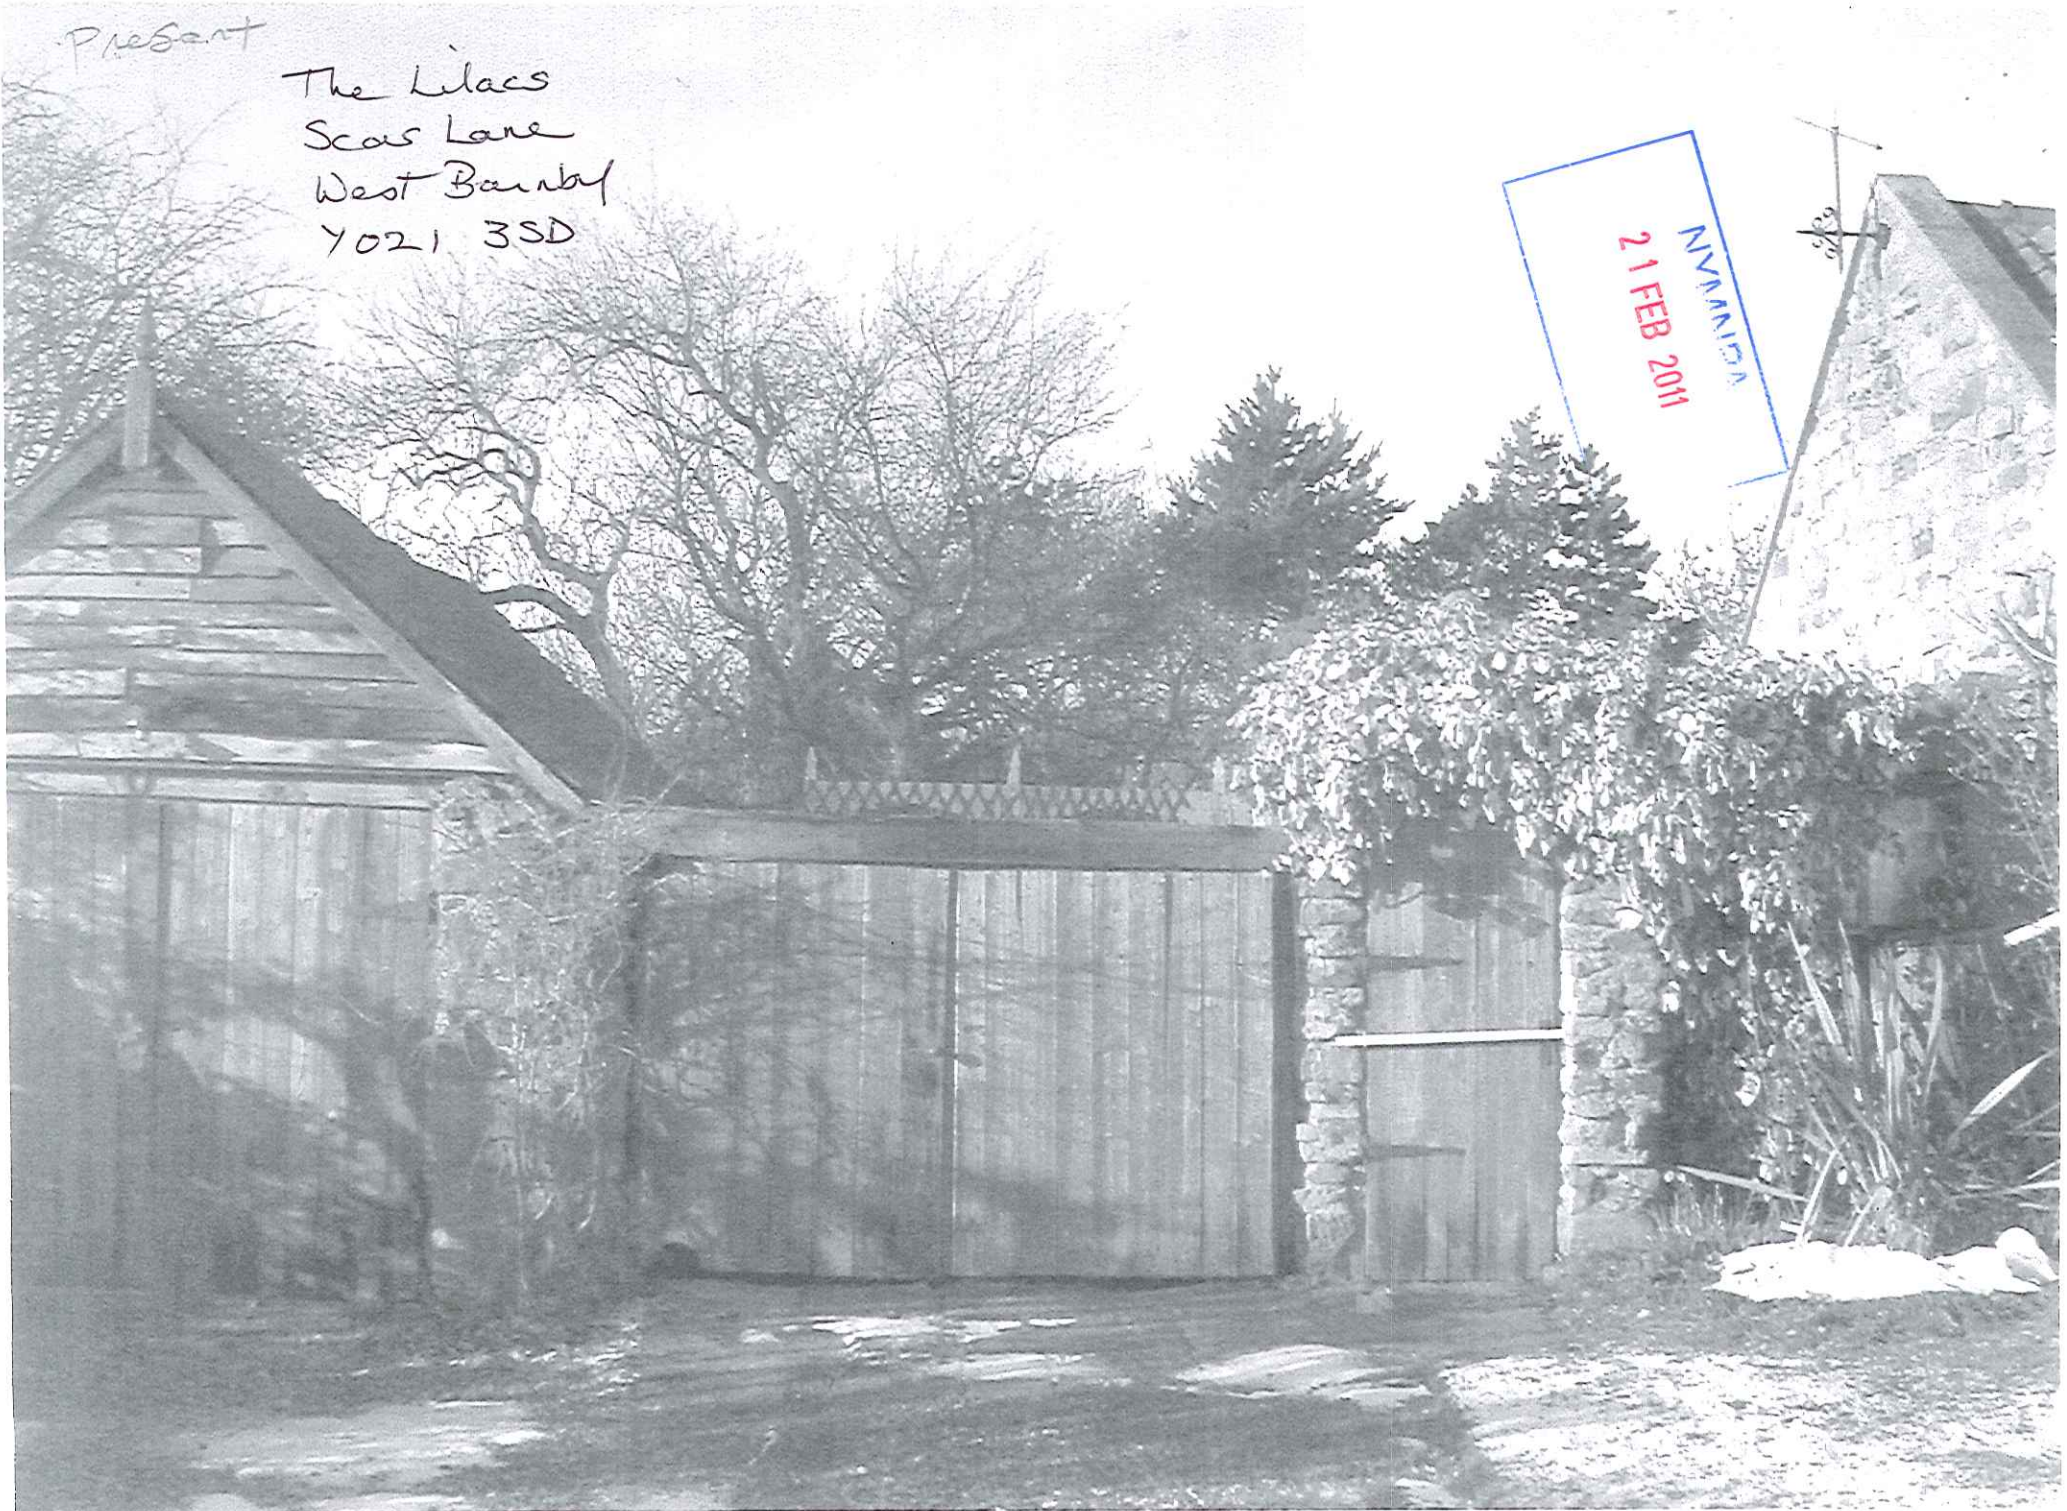

yours sincerely

Present
