

Ref NYM/2011/0411/NOW

Heritage statement for above planning request

The present heating system of electric storage heaters is expensive to run and provides heat at times when not always required and is totally out of character with a building of the age of Hedgehog Barn. The installation of a dual fuel eco stove will heat most of the building in a far more efficient manner and is more in keeping with the character of the building. The majority of the flue will be internal and will provide along with the stove itself an interesting internal feature entirely in keeping with the main room. The external flue will make almost no impact on the appearance of the building and the installation will require no alteration to the structural integrity of the original building.
