Walls and gate piers enclosing grounds to Egton Manor House

GV

II

Walls and gate piers. C19 and C20. For the Egton Estate. Sandstone, part hammered, part herringbone-tooled. West side: walls approximately 1.25 metre high, with cambered coping. Pedestrian gateway towards southern end, of square-section piers with overhanging pyramidal caps and urn finials. North side: wall approximately .60 metre high, ramped up to approximately 1.1 metre. Sloped coping. Pedestrian and carriage gateways with square-section piers and pyramidal caps. Ball finials to pedestrian gate. East side: approximately 1.1 metre high, with sloped coping, stepped up, and curved in places. Square-section piers with overhanging pyramidal caps and ball finials at northern end.

Walled garden and attached sheds approximately seventy-five metres north-east of Egton Manor House

GV

II

Garden walls and shed. Probably C18 with C19 alteration. Herringbone-tooled sandstone, south and east walls banded internally in orange-red brick in English garden wall bond. Sandstone ashlar dressings. Shed roofed in pantiles. Walls of varying heights, ramped up in places following sloping ground. Flat coping. Gateway in south wall has square-section chamfered piers with keyed round arch on moulded impost. Moulded cornice beneath entablature supporting heraldic beasts. In east wall, keyed segment-arched niche with seat, and keyed round-arched gateway. Similar gateway in north wall. Sheds in south side: 1-storey, 5-bay range. Paired board doors in centre, and paired flat arches beneath chamfered timber lintel at far right end. Remaining openings are 16-pane sashes. Doors and windows have tooled lintels. Corbelled eaves; coped gables and central stack. Left return: louvred owlhole in chamfered surround in gable end. Walled garden possibly survives from earlier house occupied by the Elwes family until 1869.
