

Timber rack, which means I can stock a bigger amount of timber so less deliveries are needed.

Circular saw, used for ripping lengths of timber.

Phase converter, so I can have 3 phase machines which are easier to come by second-hand.

Spindle moulder set for tenoning, so every joint is accurate.

2nd spindle moulder which I use for rebating, moulding, bevelling, etc.

Figure 1 work shop sign.

Existing office

Double bag dust extraction, all dust re-used for agriculture.

Mortise machine, for making mortise and tenon joints.

2x planer thicknesser's, used as a pair to save time changing beds, which makes a more sufficient system
