re Wind turbine.. I think Mr Else is a very forward thinking farmer In that he is clealy looking to the future and try to farm in a sustainable way. With the use of renewable energy. With him been an organic farmer he has no reliance on man made sprays and fertilizer. I feel Mr else and his famliy should be fully surrported in this application. Farming is ever changing therefor farmers need to move and adapt with it. This would allow the farm to reduce cost and grow thus creating much needed jobs and trade in the parks. Also helping with investment in upkeep of the farm land with in the parks ie dry stone walls etc. Therefore i fully surrport Mr Else in his application tor a wind turbine.

Subject: Proposed wind turbine

Please find herewith a letter for Mr Matthew Else, Grange Farm, Staintondale, Scarborough, YO13 OEN, for 50kw wind turbine.

As a farmer, and former dairy farmer, I would like to emphasize the huge commitment which Mr Else and his young family have undertaken, and I would like to take this opportunity

to urge you to think favourably on the above planning matter. Dairy farming requires a tireless dedication from all involved and the financial drain in this current turbulent

financial climate is huge. The possibility for wind energy to be harnessed not only for the good of Mr Else but also for all of us must surely be seen as a welcome investment for all.

Energy costs are increasing at a daunting rate for everyone, but the rate for dairy farms must be overwhelming. As a recently retired dairy farmer I can say at first hand how hard it is

to balance the books with all costs inflating whilst the milk price is either stagnant or reducing in real terms. I am sure that Mr Else will not have taken the decision lightly to invest in

both the future of his business but also in the future of our planet.

Regards,

Mr W L Scaife.

Dear Mr Scaife

Thank you for your email received 30 January 2012 making comment on planning application NYM/2011/0865/FL. Unfortunately under current Planning Legislation we require a full postal address to be supplied with your email before any comments can be taken into account.

Yours sincerely

Mrs Wendy Strangeway

Planning Department

Support Letter: Reference Mr. Else, Grange Farm, Staintondale.

I write as a local business and employer of local people, along with being a neighbour in support of the application from the Else family of Grange Farm, Staintondale, Scarborough.

As a responsible company for the environment and countryside, we would be in full support for Grange Farm to generate renewable power using a wind turbine. This will be a sustainable commodity for future generations. In my opinion, along with solar panels this is ours and our future generations legacy.

The proposed site of the wind turbine along with the appropriate screening will allow the turbine to blend within the terrain and countryside. As the site is over 350 metres from the old railway line, in my opinion, would not present any issues for the frequent users of the line for example walkers, horse riders and cyclists, I feel this would be aesthetically acceptable for them also.

Grange Farm is also a valued customer of our business, we provide back up and support for their equipment and machinery to assist them maintain a large dairy herd in our beautiful countryside. Farming needs our support for future generations it is vital to maintain our countryside. I also support their keen approach to maintain our local green environment.

Subject: WIND TURBINE

Dear Ms Saunders

I write to support the planning application for the installation and erection of a wind turbine by Matthew Else of Grange Farm, Staintondale. Dairy farms are large users of electricity, not only for the milking machines but for water heating (required for plant sterilisation), for refrigeration (to cool the milk to 4 degrees max.) and, increasingly, slurry handling and treatment. Electricity costs are thus a large budget item and many dairy farmers are installing wind turbines in the knowledge that they are future-proofing their businesses from rising energy costs. Farmers who cannot install turbines risk becoming uncompetitive with farmers who are able to install turbines.

The land provides a living for a farmer and it is appropriate that the land should also provide the energy. The Government is rightly committed to 'green sustainable energy' and I hope that the National Park Authority feels able to allow Matthew and his family to 'do their bit' for the environment.

Yours sincerely
